SUMMARY

Customer-facing full-stack engineer with CS/ML training, software QA experience, AI workflow tooling, and hands-on product development. Strong fit for forward-deployed engineering: translating ambiguous customer workflows into technical plans, building data-backed features and integrations, documenting launches, debugging live issues, and communicating clearly with both users and engineers.

EDUCATION

Georgia Institute of Technology

M.S. in Computer Science, Machine Learning (GPA: 3.83)

Atlanta, GA

Aug. 2024 – Present

University of California, Irvine

B.S. in Computer Science, Minor in Mathematics

Irvine, CA

Graduated 2022

TECHNICAL SKILLS

Languages: Python, Go, Java, JavaScript, TypeScript, Swift, C, C++, SQL, Bash

Full-Stack: React, Next.js, Node.js, REST APIs, Spring Boot, Convex, Clerk, Stripe, Postman

Cloud/Data: AWS Certified Cloud Practitioner, Docker, Terraform, CI/CD, Vercel, MySQL, DynamoDB, Pandas, NumPy

AI/Automation: Claude Code, Codex, OpenClaw, Claude Opus, LLM APIs, Prompt/Context Design, Workflow Automation

Practices: Technical Troubleshooting, Customer Communication, QA, Documentation, Git, Linux/Unix, Agile/Scrum

EXPERIENCE

Specialist

Apple, Inc.

Aug. 2024 – Present

Santa Clara, CA

- Resolved technical issues for 20+ customers daily across hardware, software, account, device, and workflow problems; translated ambiguous root causes into clear, customer-safe next steps.
- Drove \$84K+ in revenue by discovering business needs, recommending technical solutions, and onboarding 72+ small business clients through product selection, setup guidance, and adoption support.

Software QA Engineer Intern

Extron Inc.

May 2021 – Sep. 2021

Milpitas, CA

- Drove a 75% migration of a legacy shipping platform by documenting target architecture, validating workflows, and defining the next-phase technical roadmap.
- Executed 80+ user journey tests per sprint to validate business logic, reproduce defects, document edge cases, and improve release reliability across shipping workflows.

PROJECTS

Mehndi Market | *Next.js, TypeScript, Convex, Clerk, Vercel, Stripe* | *In Progress*

[Preview deployment](#)

- Building an early-stage full-stack marketplace with authenticated user flows, seller onboarding, listing discovery, and a curated storefront.
- Implemented Convex schema, queries, mutations, validation, active-listing indexes, seller metadata, price fields, and location support for data-backed marketplace workflows.
- Own roadmap across seller setup, buyer discovery, payments, and trust workflows, translating messy marketplace requirements into implementation-ready product specs.

Terraform Provider Mikrotik | *Go, Terraform, RouterOS, Infrastructure-as-Code*

<https://github.com/ddelnano/terraform-provider-mikrotik/pull/176>

- Implemented Terraform resource logic for WireGuard VPN interfaces and peers in Go, including provider schemas, CRUD operations, RouterOS command mappings, and invalid-resource error handling.
- Collaborated with open-source maintainers on test coverage, acceptance criteria, review feedback, and release readiness for production infrastructure automation.

AI Workflow Automation | *Claude Code, Codex, OpenClaw, Python, Shell*

- Built repeatable AI-assisted workflows for research, document generation, implementation planning, debugging, QA, and file-system automation.
- Designed reusable prompts, task instructions, output checks, and human review loops to keep long-running AI workflows reliable across ambiguous tasks.
